Analyze Web Server Logs using Webalizer.

Aim:

To analyze web server log files using Webalizer and generate statistics about website traffic, visitors, requests and bandwidth usage.

Procedure:

* Install and configure the Webalizer tool on the system.
* Locate the web server log file to be analyzed.
* Run Webalizer to process the web server logs.
* Open the generated HTML report in a web browser.
* Analyze visitor activity and traffic patterns using the graphs and tables.
* Save or review the generated report.

Result:

Thus, Webalizer was used to analyze web server logs files successfully, and statistical reports using website traffic, visitors, requests and bandwidth usage are generated.
