Reverse shell using TCP Socket.

AIM:

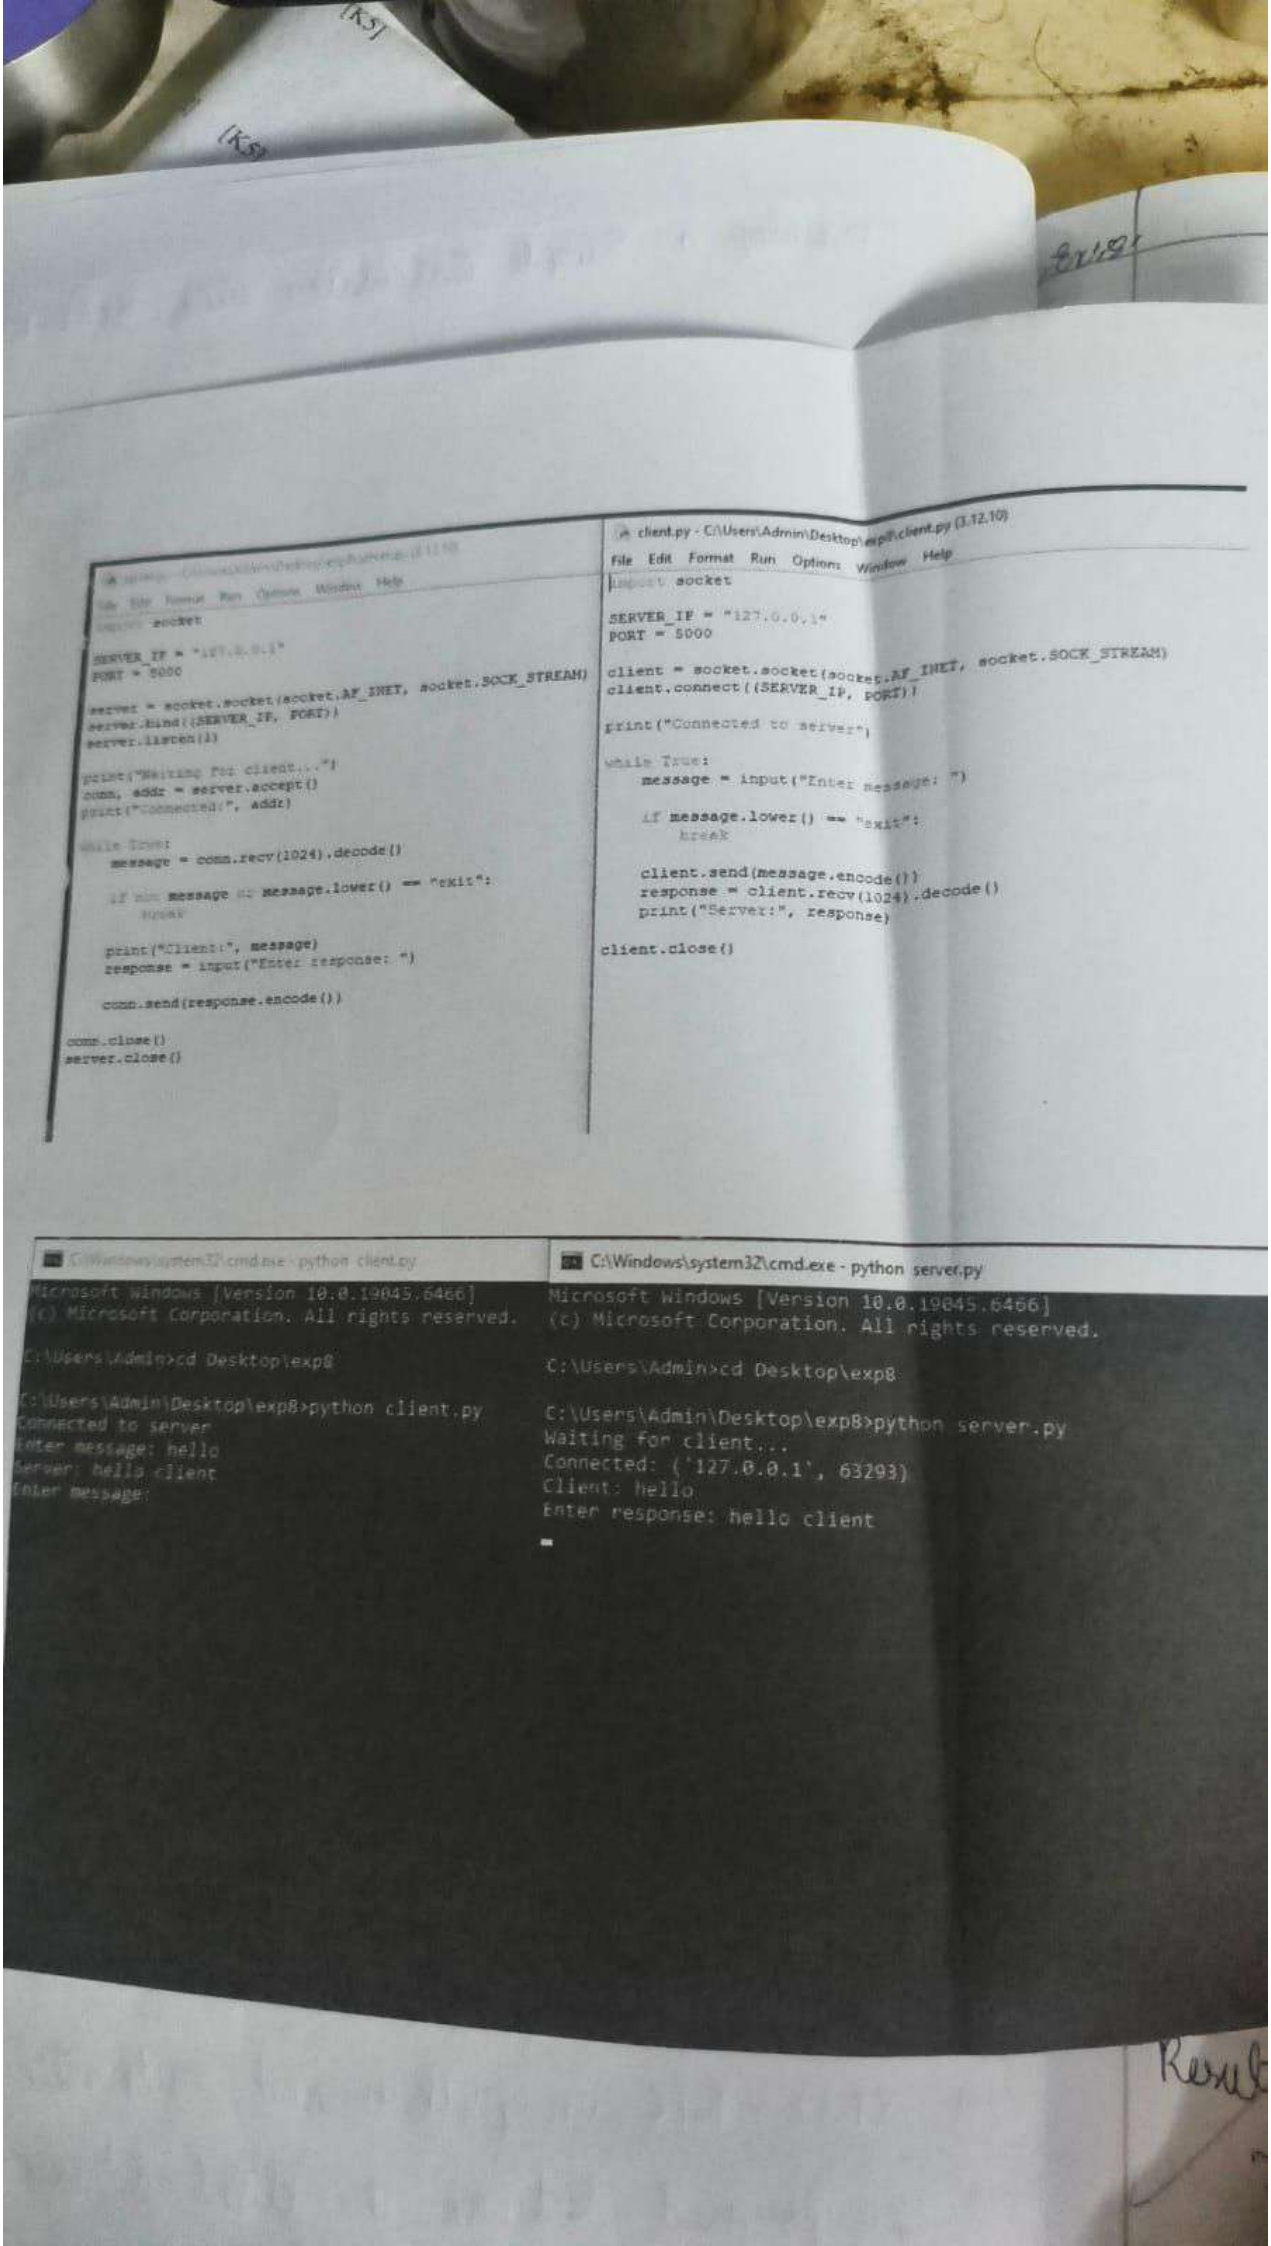

To develop a TCP socket based client server program for communication between two systems.

Procedure:

* Import the socket module.
* Create a TCP socket 127.0.0.1 and port 5000.
* Start the server and wait for a client connection.
* Connect the client to server.
* Send and receive the server message using send() and recv().
* Terminate the connection using exit.

Result:

Thus, a TCP socket based client server Comm
ogram was successfully executed on Local host.

```
import socket

SERVER_IP = "127.0.0.1"
PORT = 5000

server = socket.socket(socket.AF_INET, socket.SOCK_STREAM)
server.bind((SERVER_IP, PORT))
server.listen(1)

print("Waiting for client...")
conn, addr = server.accept()
print("Connected:", addr)

while True:
    message = conn.recv(1024).decode()

    if not message or message.lower() == "exit":
        break

    print("Client:", message)
    response = input("Enter response: ")

    conn.send(response.encode())

conn.close()
server.close()
```

client.py - C:\Users\Admin\Desktop\exp8\client.py (3.12.10)

File Edit Format Run Options Window Help

```
import socket

SERVER_IP = "127.0.0.1"
PORT = 5000

client = socket.socket(socket.AF_INET, socket.SOCK_STREAM)
client.connect((SERVER_IP, PORT))

print("Connected to server")

while True:
    message = input("Enter message: ")

    if message.lower() == "exit":
        break

    client.send(message.encode())
    response = client.recv(1024).decode()
    print("Server:", response)

client.close()
```
